The immense volcanoes of Peru, of Teneriff, of Etna, of Solfatara, and of Vesuvius, are situated in the midst of porphyric rocks, the genus of which is between horn-stone and petrosilex, which hold in union a great quantity of schorl, feldspar, greenish quartz, or chrysolites in rounded flints (o). In the Isle of Elba I have not discovered any kind of porphyry, or basalt, or stones which contain olivine, augite, leucite, phonolite, or crystals of feldspar. It is also to be added, that time and the nature of volcanoes are the continual sources of destruction. The contact of air and the acidulous sulphuric vapours affect the superficies of volcanic mountains, and the dreadful chaos occasioned by the overwhelming force of the excessive heat to which they are exposed, is soon visible to...
