Geological Survey Information Services distributor, 2003. LC Number: TN460 . G46 2003 OCLC Number: ocm53949903 Subject: Mercury. Excerpt: . . . Mercury in Coal and Mercury Emissions from Coal Combustion By Robert B. Finkelman Abstract Mercury emissions from coal-red electric generating utili-ties are a major uncontrolled source of mercury in the environ-ment. This mercury may be contributing to serious health problems in segments of our society. The USGS is compiling information on mercury in coal that may be useful in developing strategies for reducing mercury emissions from coal use. The USGS coal-quality database contains information on mercury concentrations in more than 7, 000 coal samples. Detailed geochemical analysis has helped to determine that mercury in coal is commonly associated with pyrite, but other modes of occurrence may be locally important. Physical coal cleaning removes, on average, 37 percent of the mercury. Characteriza-Figure 8. Four Corners coal-fired electrification power plant near Farmington, N. Mex. Emissions from such power plants that use coal tion of feed coal and its combustion byproducts...
